

WHAT VERSION OF THE CONTROLLER DO I HAVE?

Thank you for purchasing from MAD-DOG-CONTROLLERS. This document will assist you in determining which version of the controller you have.

The wireless controller comes in two versions, commonly referred to as “MATRIX” and “CG”. If you remove the battery pack from your controller and look at the components on the green circuit board, it is easy to tell which version you have by comparing to the picture below. The “MATRIX” board has inductors L1 and L6 visible on the right. The “CG” has capacitors C15, C17 on the left and diode D6 (the black chip with 3 leads) on the right.

The wired controller can be treated as a “MATRIX” controller with the one exception of the location of GND and VCC. This will be addressed in the directions if applicable.

If you have any questions or problems, please don't hesitate to contact us at support@maddogcontrollers.com.
